hem. The main entrance facing Edmondson Ave. has a wider, recessed door surround and a large transom with grillwork above the solid doors. The words "Telephone Building" are engraved in the stonework above the door, and a newer Verizon sign hangs next to it. The first-floor windows are all bricked in. Above the first floor, windows are arrayed in vertical columns, which are aligned with the openings on the first floor. The window columns are slightly recessed, with vertical "ribs" of ornamental projecting header bricks enhancing the verticality of the arrangement. The windows are average-sized six-over-six metal windows with thin stone slab sills. The Edmondson Avenue façade is five bays wide and the short end of the L, facing west, is three bays deep. At the west end of this section is an additional half-story, which is one bay wide facing the front and three bays deep on the west end. It has a narrow stone band at its roofline and a single three-over-three window at the center of its west facade. On the first floor of this section facing south is a double-leaf door entry The longer south wing of the building is an additional five bays long and three bays wide on its south end. The secondary south façade has a projecting center section containing the three bays. blank side sections, and a chamfered corner that forms a small tower. The tower has a quarter-story projection above the main roofline and a single bay of windows facing southwest above the entrance door. The entrance is deeply recessed and has a wide stone surround below the broad belt course. In front of the entrance is a chain-link enclosure, and chain-link security fencing surrounds much of the south façade. The first floor of the south façade has infilled windows, a single metal door, and a flat-roofed projection at basement level with large vents. The east façade of the building, which overlooks the modern one-story commercial strip, is eight bays long.

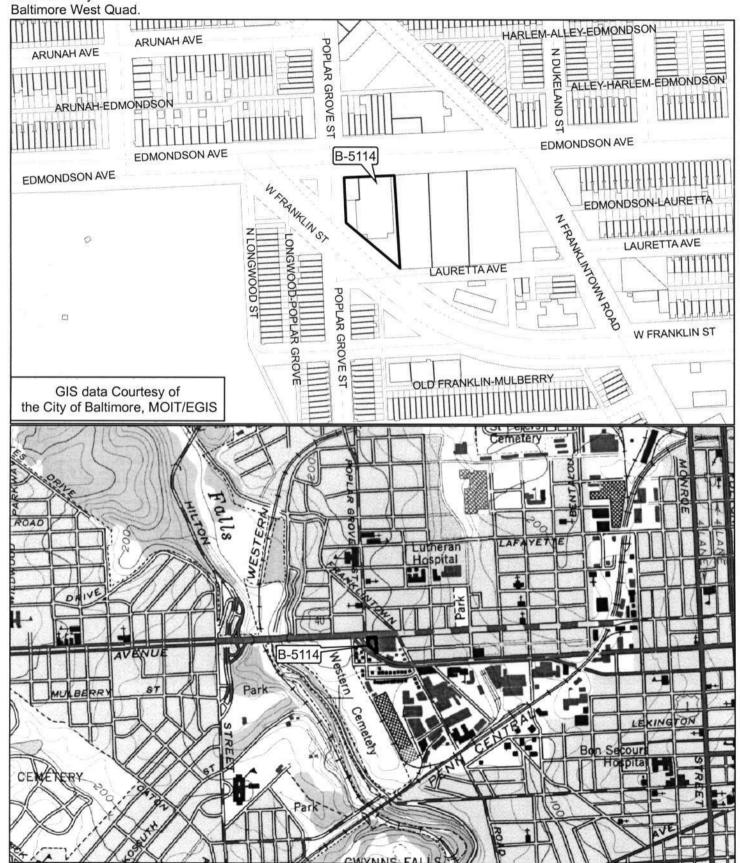

According to 1951 Sanborn map notations, this building was constructed in 1937, but a cornerstone on the northwest corner of the building says 1947. It was built as a new dial center to support additional telephone exchanges in West Baltimore. As telephones grew in popularity during the first half of the twentieth century and new neighborhoods developed, C & P added new dial centers around the city to handle the increased volume. Little historical information is available on this specific building, although anecdotal information can be gleaned from articles about other C & P buildings in Baltimore. It appears that the Edmondson Dial Center is now used by Verizon, though the recorded owner is still C & P Telephone Company.

The building is well preserved on its upper floors, but has lost some integrity on the first floor due to infill of window spaces and changes to doors. Some of these changes appear to have been made at an early date, probably for security and ventilation purposes o protect delicate equipment housed inside. The simple, elegant design of the building remains effective, and it is a good example of an Art Deco municipal-style building of the mid-twentieth century. The building occupies a prominent position at a busy intersection. Though its setting has changed somewhat with widening of adjacent roads and construction of mdoern infill next door, it continues to tower above the surrounding two-story rowhouse neighborhoods as it did originally. It appears to remain in use as part of the infrastructure of today's telephone system, but is a reminder of the older trunk line system. The C & P Telephone Building--Edmondson Dial Center is recommended eligible for the NRHP.
